WELDING GLOSSARY

The Glossary has been created as part of the Migration for Development in the Western Balkans (MIDWEB) project, which received financial assistance from the European Commission IPA 2009 Multi-beneficiary Programme 2. The information is gathered from sources duly acknowledged in the document. Every effort has been made to ensure that the indicated terminology and its related clarification are accurate and up-to-date. If you notice any errors or omissions please let us know. It is our policy to correct errors as soon as the error has been established. It is the responsibility of the user to seek current and relevant information.

November 2011

WORD	DEFINITION	WORD (NATIONAL LANGUAGE)	DEFINITION (NATIONAL LANGUAGE)
Abrasive	A material, such as sand, silicon or crushed stone, used for surface cleaning		
Acetylene Gas	A chemical combination of two elements: carbon and hydrogen		
Alloy	A metal that is made by mixing two or more metals, or a metal and another substance		
Alternating Current (AC)	Is an electrical current in which magnitude and direction change in cycles, as opposed to direct current, in which direction is constant		
Arc Welding (Shielded Metal Arc Welding)	A welding process where similar materials are joined with a heating process caused by an electric arc. In the most common use, this process includes the use of a filler metal. Arc welding refers to a group of welding processes that use a welding power supply to create an electric arc between an electrode and the base material to melt the metals at the welding point. They can use either direct (DC) or alternating (AC) current, and consumable or non-consumable electrodes. The welding region is sometimes protected by some type of inert or semi-inert gas, known as a shielding gas, and/or an evaporating filler material		
Argon	Is a chemical element designated by the symbol Ar. Argon has atomic number 18 and is the third element in group 18 of the periodic table (noble gases). Argon is present in the Earth's atmosphere at slightly less than 1%, making it the most common noble gas on Earth.		
Beveling	Preparing the ends of the pipes to be welded by machining them so that the angle of the		

	edges is anything but 90°		
Brazing	A process where metals are		
_	joined by using a filler metal		
	that melts at a temperature		
	above 450°C		
Butt Joint (Butt Weld)	A joint (or weld) where the two		
. , ,	pieces being connected come		
	directly together in the same		
	plane		
Buzz Box	Another term for a general-		
	purpose arc welder. The name		
	is derived from the sound made		
	when the welder is running		
Consumable & non	Consumable electrodes provide		
consumable electrodes -	a path for the current. They		
	also supply fuller metal to the		
	joint. Non- consumable		
	electrodes are only used as a		
	conductor for the electrical		
	current, such as in gas tungsten		
	arc welding		
Cutting Tip	The part of an oxygen torch		
earch B the	that directs the flow of the gas.		
Cutting Torch	The device used in oxygen		
	cutting to control and direct the		
	flow of the gasses used for		
	cutting and heating metal		
Cylinder	A container to store and		
eyee	transport compressed gas		
Defective Weld	A weld with one or more of the		
	following defects: Porosity,		
	undercut, slag inclusion and		
	improper weld size		
Direct Current (DC)	- Or "continuous current," is		
	considered as the constant flow		
	of electrons in the single		
	direction from low to high		
	potential		
Down Hand Weld	A vertical weld where the		
	welder starts at the top and		
	works downward		
Edge Weld	A weld where the edges of two		
	pieces come together		
Electrode (Arc Welding)	A rod made up of filler metal		
	with a coating on it designed to		
	aid and protect the bead during		
	the welding process.		
Electrode Holder	The "handle" portion of the arc		
	welder that holds the electrode		
	in place.		
Face Shield (Helmet)	A safety device worn over the		
	face to protect the eyes and		
	face from the arc, sparks and		
	molten metal. Arc welding		
	without proper eye protection		
	can lead (quickly) to permanent		
	can lead (quickly) to permulent	1	1

	damage to the eyes.	
Ferrous	Containing or relating to iron	
Fillet Weld	A weld joining two pieces of	
	metal that are more or less	
	perpendicular to each other	
Filler metal	Is a metal added in the making	
	of a joint through welding,	
	brazing or soldering. Various	
	types of filler metals exist	
Fixture	A tool or device used to hold	
	pieces in place for welding.	
Flat Weld	A weld where the pieces being	
	joined come together	
	horizontally in front of and	
	below the welder	
Flux	A substance that facilitates	
	soldering, brazing and welding	
	by chemically cleaning the	
	metals to be joined	
Fuel Gases	Gases mixed with oxygen in	
	heating and cutting operations.	
Gas Tungsten Arc Welding	Commonly known as tungsten	
(GTAW) or (TIG)	inert gas (TIG) welding; an arc	
(=,=.,=.,	welding process that uses a	
	non-consumable tungsten	
	electrode to produce the weld	
Hand Shield	Similar to a Face Shield or	
	Helmet, but held in front of the	
	face rather than worn	
Iron	A base element that is the	
	primary substance in the	
	makeup of steel, cast iron and	
	wrought iron	
Inert	A gas that does not normally	
gas/Shielding	combine chemically with	
gas/ sincluing	materials. Their purpose is to	
gas	protect the weld area from	
	atmospheric gases, such as	
	oxygen, nitrogen, carbon	
	dioxide and water vapor	
Lap Joint	A joint where two pieces of	
	metal lap over each other,	
	allowing a bead to be placed	
	between the edge of one piece	
	and the face of the other	
MIG Welding	Also known as wire-feed	
(Metal Inert Gas)	welding, although	
,	it is possible to do wire-feed	
	welding without the inert gas.	
	Metals that are difficult to arc	
	weld may be MIG welded	
Mild Steel	Steel with less than 0.15%	

I 		1	
	carbon. (Also called low carbon		
	steel). Most steel in common		
	use is mild steel.		
Out-Of-Position	Any weld where the work is not		
	flat in front of the welder.		
Weld	nde in none of the weider.		
Overhead Weld	An inverted weld where the		
Overneau weiu			
	pieces being joined are above		
	the welder.		
Oxyfuel	Pure oxygen combined with gas		
Plasma	A gas that has been heated to		
riasilia			
	the point where it will conduct		
	electricity		
Plasma Cutting	A cutting process where the		
	metal is heated to the melting		
	point by an arc through the		
	plasma and then removed by		
	the pressure of the gas as		
	directed by the nozzle. CNC		
	(computer numeric control)		
	plasma cutters are used for		
	precise cutting of complex		
	patterns in metal.		
Polarity	The polarity of a machine refers		
	to direction of current flow.		
	Polarity can only be obtained		
	on a DC machine.		
Radiation	Energy from heat or light that		
	you cannot see.		
Shielding Gas	See Inert gas		
Slag Inclusion	Non-metallic material trapped		
	in a weld.		
Soldering	A method of joining metal parts		
	using a filler material (solder)		
	that has a melting temperature		
	below 450°C .		
Spot Weld	A weld between two		
Spot Weid	overlapping pieces of material;		
	normally used for sheet metal		
Tack Weld	A small weld used to hold		
	pieces of an assembly in place		
	prior to the final (continuous)		
	welding.		
TIG Welding	A welding process where an		
-	inert gas protects the molten		
(Tungsten Inert	metal from the atmosphere to		
Gas)	produce a high quality weld.		
Jasj			
		<u> </u>	

		
Tungsten	A non-consumable material	
	used in TIG welding to carry	
	current to the weld puddle.	
	(very hard, heavy, steel-grey-	
	to-white transition metal; W in	
	the periodic table.)	
Up -Hand	A vertical weld where the	
	welder starts at the bottom and	
Weld	works upward.	
Ventilate	To cause fresh air to enter and	
	move around an enclosed	
	space	
Weave Bead	A welding pattern often used in	
	butt welds where the welder	
	moves the arc back and forth	
	across the joint while also	
	moving along it	
Weld	To join two pieces of metal	
	together permanently by	
	melting the parts that touch.	
Welder (noun)	A person whose job is welding	
Welding	A device that provides an	
_	electrical current to perform	
Power	welding	
Supply	C C	
Welding Rod	A means of delivering filler	
	metal to the weld. In arc	
	welding, the rod is called an	
	electrode	
Voltage (V)	Is the pressure required to	
	move the electric current	

This glossary was based on parts of the Welding Terminology prepared by the Winnipeg Technical College and the Department of Labour and Immigration of Manitoba available at: http://www.jcfswinnipeg.org/documents/Welders-Terminology.pdf
